

## National Health Service

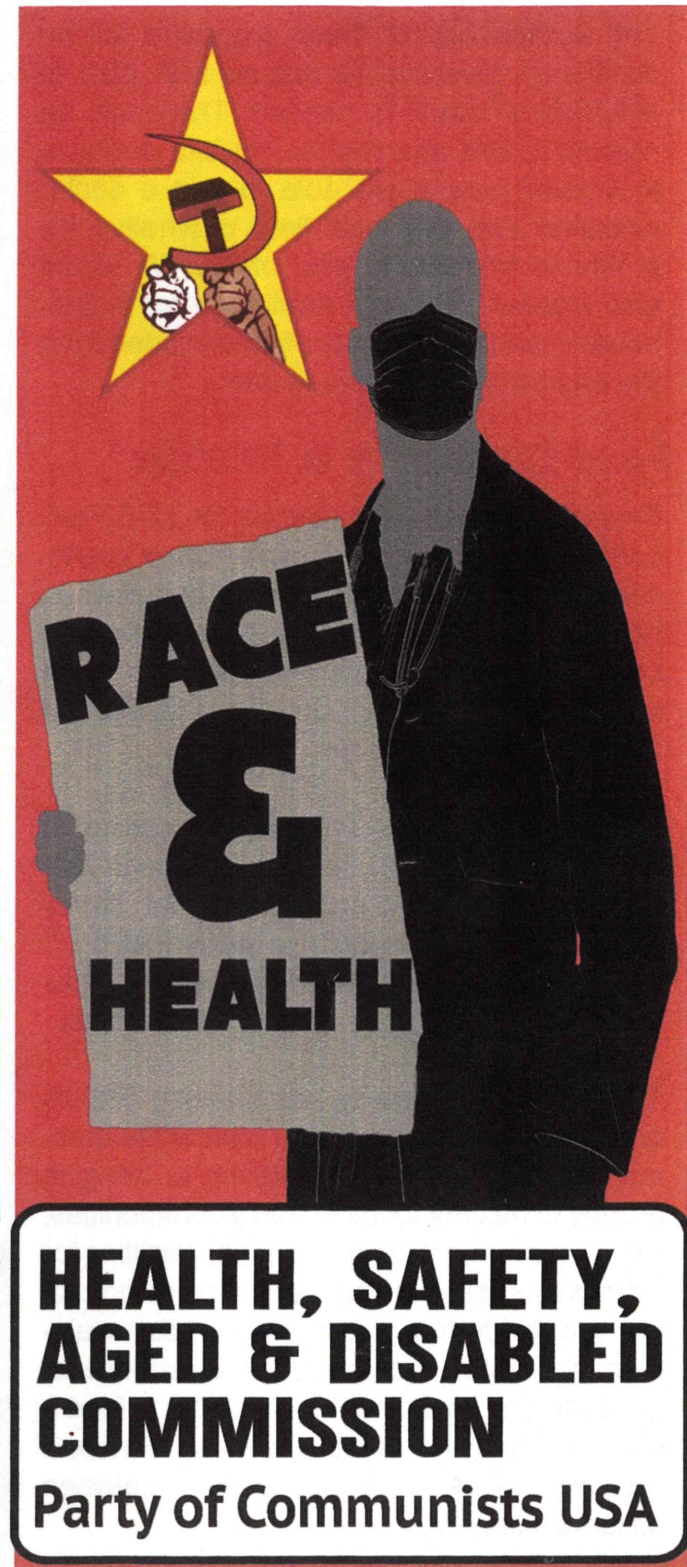

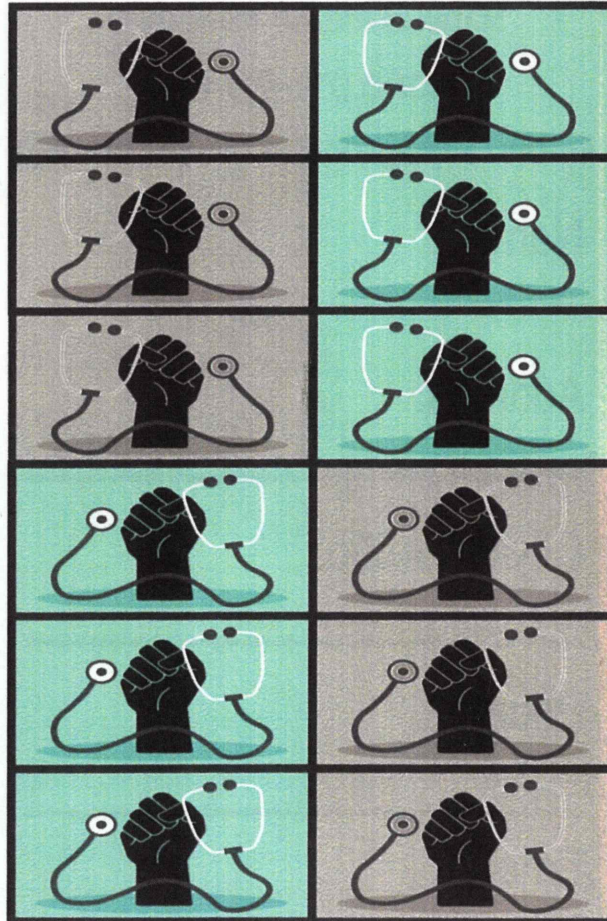

The Party of Communists USA is calling for the creation of a national healthcare system that will be equally accessible by all Americans. Along with the national healthcare system we are calling for a national program to train new medical professionals who can speak the language of their community so that those who are passionate about helping others can be trained and get to work helping people.

In addition, we are calling for a robust workplace health and safety program to provide safer workplaces to all Americans and to properly care for injuries in the workplace. No American should have to worry about retaliation for reporting an injury to their boss, they should receive prompt and high-quality medical treatment and have the ability to recover without being pressured to return to work before they are ready.

Under these programs care for chronic and so-called "lifestyle" diseases like diabetes will become free and easy. Americans will no longer have to worry about the rising cost of prescription medications or being price-gouged by drug companies on your medications.

## Introduction:

Capitalism has failed to meet the needs of BIPOC communities in the USA. The COVID-19 Pandemic has shown us the cost of systemic racism and capitalist healthcare policies on BIPOC communities. Black Americans are nearly two times more likely than white Americans to die from COVID-19 and Hispanic or Latino Americans are over three times more likely to be hospitalized. We cannot have equal economic opportunities for all Americans until we have equal access to healthcare for all Americans.

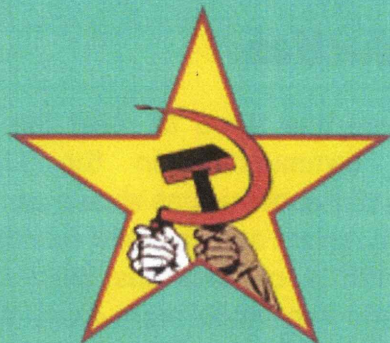

The accessibility of these programs will be constantly reviewed to ensure that care is available where it is needed. There will be no-cost mobile and telehealth visits available to ensure people are able to see a doctor wherever they live regardless of whether it's profitable to setup a local office. We would also expand treatment availability for indigenous Americans who are often excluded from the traditional healthcare system.

## Food Insecurity & Health:

Providing for better healthcare for all BIPOC communities in the US doesn't stop at healthcare though, serious inequalities in access to healthy food affect so many growing up and living in these communities that this issue must be addressed specifically to truly affect the health of these people.

In turn, Party of Communists USA is calling for real grocery stores to be built in communities currently served by predatory dollar stores and for stores to be built in areas that don't currently have them so that everyone has access to fresh foods in their neighborhoods.

The scourge of obesity has plagued BIPOC communities at higher rates than white communities for too long. In addition to bringing access to healthy foods to these communities, we are also demanding that public facilities for exercise be created nationally in all communities to provide free access to workout equipment and active recreation for all Americans. In addition to providing the capability to lead a healthier life these facilities will also provide a safe third-place for our children between school and home.

These programs will provide access to the highest quality of life for all Americans and make financial ruin from medical emergencies a thing of the past. No person living in this country should ever have to worry about losing their livelihood or their life because the cost of medical care is too high and no child living in this country should ever have to go hungry.

## Get Involved:

The unique medical concerns facing BIPOC communities in the USA require real solutions not more debates from Democrats and Republicans, please join together with the PCUSA in calling for a brighter future for all Americans!
